### **DETAILED ACTION**

Page 2

### Response to Arguments

- 1. This Office action is in response to applicant's paper filed 3/21/2005. Claims 1-25 as amended are still in consideration for this application. Applicant has amended claims 1, 8, 13, and 16. Applicant has canceled no claims. Applicant has added no claims.
- 2. Examiner withdraws the 112-second paragraph rejection(s). Examiner thanks applicant for making the necessary corrections to clarify the recited claimed subject matter and thus withdraws the rejection.
- 3. Examiner does **not withdraw** the obviousness rejection to *Perkins* in view of *Basilier*. The following comments fully address applicant's arguments with respect to the rejection.

  Applicant's arguments filed 3/21/2005 have been fully considered but they are not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., *VPN*; construction a safe path between a mobile and either on or a *HA* or *FA*; a corresponding node CN communicating with the MN at all) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Examiner notes the allowed claims contain some of the subject matter mentioned at issue above.

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2663

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1, 2, 4, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over "Mobile IP and Security Issue: An Overview" to *Perkins* in view of U.S. Patent No. 6,728,536 B1 to *Basilier et al.* ("Basilier").

In making a proper obviousness rejection under MPEP 706.02(j), the examiner will address the following four steps:

- a) the relevant teachings of the prior art relied upon, preferably with reference to the relevant column or page number(s) and line numbers where appropriate;
- b) the difference of differences in the claim(s) over the applied cited references;
- c) the proposed modification of the applied reference(s) necessary to arrive at the claimed subject matter; and
- d) an explanation why one skilled in the art at the time of the invention was made would have been motivated to make the proposed modification.

As such to **claim 1**, for step (a) *Perkins* discloses a server apparatus as AAA-H, see e.g., figure 3. *Perkins* further discloses a distribution means that distributes the information to construct a safe communication path between the terminal within an external network of a move destination and the other terminal with whom the terminal communicates. In particular, "the terminal" is MN and "other terminal" is HA. As such, see e.g., section 5 on pages 143-144 where the AAAH first makes local arrangements with the HA (i.e., a predetermined position registration message" and second sends a registration response back to the AAAL (i.e., an authentication response message").

For step (b) *Perkins* may be silent or deficient to the further limitation of using a memory means that stores information for constructing a safe communication path within an IP network in relation to the terminal. In particular, examiner notes that limitation

Art Unit: 2663

may be taught since the AAAH obtains both key information (see e.g., section 5.2 on page 145) and allocates both an HA and an IP address (see e.g., section 5.1 on page 145)

Basilier teaches the further recited limitation above at e.g., the background in column 1, lines 37-49.

For step (c), the proposed modification of the above-applied reference(s) necessary to arrive at the claimed subject matter would be to modify *Perkins* by clarifying that the information is stored in a database at the AAAH.

In order to establish a prima facie case of obviousness for step (d), three basic criteria must be met. The three criteria according to MPEP 706.02(j) are as follows:

First there must be some suggestion or modification, either in the reference(s) themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine the reference teachings. Second, there must be a reasonable expectation of success. Finally, the prior art reference (or references when combined) must teach or suggest all the claim limitations.

As such, for step (d) examiner notes that it would have been obvious to one skilled in the art prior to applicant's invention to include the further limitation of using a memory means that stores information for constructing a safe communication path within an IP network in relation to the terminal. In particular, the motivation for modifying the reference or to combine the reference teachings would be to maintain state information for subscribers. In particular, *Basilier* cures the above-cited deficiency by providing a motivation found at e.g., column 1, lines 37-49. Second, there would be a reasonable expectation of success since both references teach AAAH. Thus the references either in singular or in combination teach the above claim limitation(s).

As to claim 2, the registration response message transfer the information back to the AAAL.

As to **claims 4-5**, see similar rejection to claim 2 and section 5.3 starting on page 146.

6. Claims 3, 6, 7, and 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over "Mobile IP and Security Issue: An Overview" to *Perkins* in view of U.S. Patent No. 6,728,536 B1 to *Basilier et al.* ("*Basilier*") in further view of "Mobile IP Authentication, Authorization, and Accounting Requirements" to *Glass et al.* ("*Glass*").

As to claim 3, Basilier and Perkins discloses AAA and security but do not specifically teach IPSec (e.g., a VPN). Glass teaches IPSec e.g., in Section 3.1 at page 7. Examiner proposes to modify Basilier and Perkins to clarify that IPSec is used. Thus examiner notes that it would have been obvious to one skilled in the art to use IPSec since keys are exchanged. Glass further provides a motivation since any key distribution protocol can be used, see e.g., Section 5.0 on page 11. Examiner notes a further reasonable expectation of success since all three references uses AAAH.

As to claim 6, see similar rejections to claims 1 and 3. In particular, a mobile terminal is MN, a home authentication server is AAAH, and a network apparatus is either AAAL or Attendant A.

As to claim 7, every time a mobile roams a registration request is sent again.

As to **claim 9**, the Attendant A handles QoS as well as maintains state of a connection (i.e., VPN information is cached), see e.g., middle of page 135.

Art Unit: 2663

As to claim 10, see similar rejection to claim 1 where the external authentication server is either the AAAL or Attendant A. In particular, see e.g., Section 5.3 starting on page 146.

As to claims 11-12, see similar rejection to claim 3.

As to claim 13, see similar rejection to claim 6.

As to claims 14-15, see similar rejection to claim 3.

### Allowable Subject Matter

7. Claims 8, 16-18 and 19-25 are allowable.

#### Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derrick W. Ferris whose telephone number is (571) 272-3123. The examiner can normally be reached on M-F 9 A.M. - 4:30 P.M. E.S.T.

Art Unit: 2663

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ricky Ngo can be reached on (571)272-3139. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
